Professional Summary

Robotics-focused engineer with hands-on control-system implementation, embedded software, and rapid prototype iteration. Experience spans combat robots, test rigs, and simulation-assisted tuning.

Technical Skills

Arduino, C++, Motor and sensor integration, Prototype testing, Embedded debugging, Documentation, Simulation tools, Node.js

Experience Highlights

- Led software integration for a combat robot project with actuator control, safety cutoffs, and repair-ready modular wiring.
- Ran repeated track and field tests to improve movement stability and detect edge-case failures under timing pressure.
- Maintained test documentation and issue logs for multi-week hardware and firmware iteration cycles.

Selected Projects

- Combat robot actuator controller with failsafe logic and telemetry output.
- Node.js-based run logger for prototype diagnostics and benchmark comparison.

Education

Bachelor-level Computer Science or Engineering background with project-based robotics, embedded, software, or automation exposure through coursework, competitions, freelance work, or internships.
